

# Rev-Trac Insights Datasheet

**Act on fact.  
Not guesswork.**

**Utilize Rev-Trac Insights for accurate insight into the state of change across all SAP systems to improve the integrity of SAP landscapes.**

*Rev-Trac Insights, a change intelligence technology for SAP solutions, incorporates the Migration Workbench, an advanced transport reporting engine for impromptu checks. That allows users to manage custom transport lists and experiment with sequencing while leveraging Rev-Trac's pre-emptive safety checks, including Overtake and Overwrite Protection Systems (OOPS), Peripheral Object Dependency System (PODS) and Code Impact Scoring System (CISS). Combined with dynamic real-time apps – Propagation, Chronological, and Comparison – and existing functionality, the technology provides instant visibility from the transport layer down into an organization's ABAP code and objects.*

With the Migration Workbench, users can select a list of transports from their SAP migration queue and run ad hoc safety checks to ensure that they will not impact the target system. These checks, in addition to comparing object versions, monitoring work in progress, and even quickly finding specific pieces of code, are just a few examples of Rev-Trac Insights' powerful functionality.

In the past, organizations manually collected the data for such insights, running the risk of human error. Rev-Trac Insights provides a crucial understanding of your system's integrity, alerting users to potential areas of threat across the landscape.

## **Rev-Trac Insights intelligence and analysis**

By monitoring change activity and then providing specific data to appropriate stakeholders, users can interpret Rev-Trac Insight's data and act quickly to make improvements or avoid unscheduled systems downtime.

- For team leaders and managers, this depth of system insight gives a sense of control previously unavailable. The UI presents data in a customizable reporting format – for example, changing the selection parameters is a way of customizing the report.
- For C-level managers, Rev-Trac Insights enables their teams to maintain the integrity of its SAP solutions as a result of better access to system data down to the department level. Meaning, management knows what is going on with the health of any system at any point in time.

Everyone associated with SAP change can benefit from the intelligence Rev-Trac Insights provides.

# Experience the power of Rev-Trac Insights

## Key analysis available

- Understand transport migrations to production
- Know the date, time and sequence of transports released or imported into a system/client
- Analyze and compare changes in production versus changes in QA, which is particularly useful if you want to perform a system refresh
- Instantly verify QA refresh or production cutover integrity
- Compare object versions across systems to assess landscape integrity
- Remotely access and browse an independent copy of SAP object version repository
- Compare historical and current objects
- Keep track of and check Work in Progress
- Monitor Work in Progress among the team
- Be alerted to object changes in production or to systems going up and down and monitor selected objects for change
- Quickly search ABAP code
- Bi-directional integration into Rev-Trac Platinum, the RSC SAP change control automation platform

## Rev-Trac Insights – the benefits

- Incorporate the power of Rev-Trac Insights into your current change and transport management controls
- Help to prevent erroneous transports migrating to production
- Administrators can import transports in a consistent sequence based on a previous import or the original export/release
- Advanced real-time apps – Propagation, Comparison and Chronological
- Quickly recover objects after a system disaster
- Find forgotten, lost or abandoned Work in Progress and clean up systems
- Recover recent iterations of Work in Progress
- Retrieve custom code and object version history from a centralized repository to rebuild systems
- Enables rapid correction of differences between QAS and PRD to maintain system integrity
- Synchronize custom object versions across SAP systems
- Rapidly search ABAP source code to find the exact line of code requested

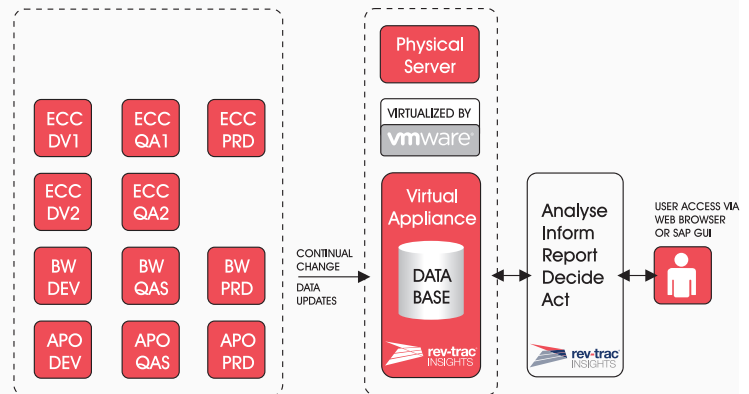

# Experience the power of Rev-Trac Insights

## Software overview

Packaged within a maintenance-free virtual appliance, Rev-Trac Insights creates an external repository of all custom ABAP code and objects for easy access and analysis. The intelligence provides focused, up-to-the-minute insights into an organization's custom code and objects in use or in development.

Both the current and historical states of custom ABAP code and objects are covered.

The Migration Workbench, Chronological, Propagation, and Comparison apps require a few transports to be imported into each licensed system.

## System requirements

### Server

- Any VMware virtual platform that can play a .vmx or .ovf file
- CPU: 1GHz (2GHz or faster recommended)
- RAM: 1GB (for 5 systems)
- Disk: Up to 128GB

### Client

- Internet Explorer 7 or later (9 or later strongly recommended)
- Firefox 10 or later
- Chrome 16 or later
- Safari 5.1 or later
- SAP GUI for Windows (with Internet Explorer 7 or later)

### SAP systems

- 620 onwards

There is a requirement to import some transports into each system, including:

- Main Rev-Trac SPS (for transport monitoring)
- Rev-Trac Security Profiles
- Rev-Trac Insights
